## Technical Analysis

### CTG\_Keep Tracking

#### Technical highlights:

- Current trend: Short-term sideways
- MACD: Moving sideways and converging to the signal line after falling deeply
- RSI: fluctuating in the range of 32 - 47

**Outlook:** After a strong correction period, CTG's lowest price in this period was at 25.8, equivalent to the Fibonacci 61.8%. At this threshold, there was a demand for bottom fishing, although the liquidity was not too high but improved compared to the previous trading days. This helped the stock's price rebound above the Fibonacci 50% level. At the moment, it is moving sideways in the large range between the Fibonacci of 50% and 38.2%, with liquidity in the gaining sessions higher than in losing sessions. These technical indicators show the possibility of CTG to keep fluctuating within this range in the short term.

**Recommendation:** Investors should keep monitoring the stock price's movements. In case the CTG rise sharply above the level of 31.3 (nearly equivalent to the Fibonacci 38.2%), with a higher liquidity, the double bottom pattern will be confirmed with the next resistance at 33.53. Otherwise, it will challenge the support of 25.92
